January 14, 2022

To Whom It May Concern:

Black Mountain Software Inc. contracted LMG Security to conduct external vulnerability scans with a focus on identifying any log4j vulnerabilities. Scanning was conducted on January 6, 2022. The automated vulnerability scans identified no log4j vulnerabilities on the assessed systems.

The goals of the technical assessments were to identify potential vulnerabilities in the external IT infrastructure.

LMG Security is a nationally-recognized cybersecurity consulting, research and education firm. Our certified consultants constantly research the latest exploits and tools, and test thoroughly with cutting-edge techniques. Our consultants conduct penetration tests, web application assessments, digital forensics, incident response, cybersecurity training, and more all over the world. We serve financial institutions, health care organizations, law firms, manufacturing companies, government organizations, and Fortune 500s. LMG staff members are well versed in industry-standard best practices, including the Open Web Application Security Project (OWASP), NIST Cybersecurity Framework, and the CIS Critical Security Controls, and employ these in security tests and assessments as appropriate.
