

Electronically print check signatures with no extra hardware to install other than using a laser printer and laser checks.

- Available with individual signature files for **GENERAL LEDGER** and **PAYROLL**
- To increase security, the software can be set to require two passwords
- Checks can be printed with or without a signature
- A password is required to print signatures
- Reports show checks printed with or without signatures
- Signatures are automatically printed at the same time checks are printed
- Checks can bear up to three valid signatures
- Signature files are securely embedded
- Optionally scan, install, maintain, and update your own signature files
- A dollar amount limit can be set in General Ledger per user; checks can still be produced over the set limit, but will not print with electronic signatures
- Never worry about your check signing equipment becoming obsolete since the only hardware requirement is a laser printer
