

Round out Black Mountain's Document Indexing software by adding Redaction. The Redaction module provides the important ability to conceal private or sensitive text prior to a document's release for public viewing. This module is priced to fit any budget.

Low price per workstation

- Minimize cost by only installing on the workstations that needs redaction capability
- Like all of BMS's applications, installation and training are included with purchase

Before making Recorded Documents Public

- Conceal sensitive information such as Social Security numbers
 - Reduce potential risk to your organization
 - Help prevent identity theft and fraud

Easy-to-use

- Within the scanning process in Document Indexing, just click on Redact
- Use your mouse to draw a box around the information to redact
- Click Publish, and your selection will show as a black box, totally concealing the sensitive text
- During an inquiry, only the redacted version of the document is available

Easy-to-undo

- If there is a need to undo the redaction or view the original document, click Restore Original
